

NEWS UPDATE

July 2012

We have made a new set of light duty lifting points for the smaller boat models (up to 6.4m). The new lifting points are placed on the inside of the 3 pc. standard U-bolts used for towing and securing the boat on trailers.

The 3-way lifting points are an obvious choice for coach boats and small work boats.

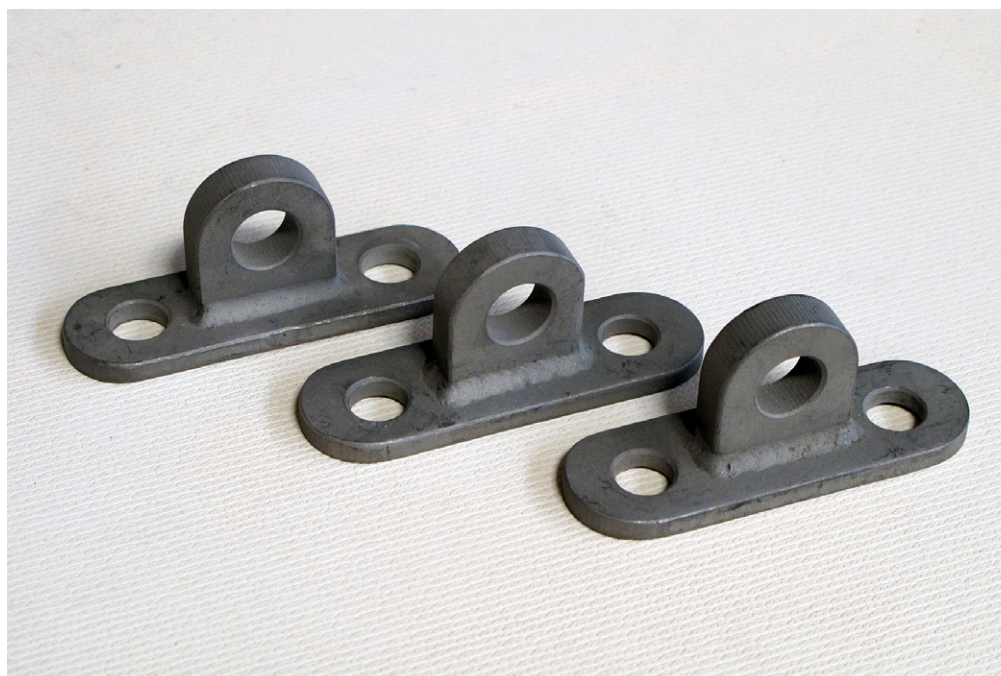

Please observe that the 3-way lifting points can only be used on boats that are not fitted with lockers in the bow.

End user price is EUR 50,00 (standard discounts apply).

Very important:

The light duty lifting points are only to be used without persons in the boat.

If your customers need to lift with persons in the boat this can only be done safely using the heavy duty 4-point lifting system.
